

Garment handling equipment for production, processing, storage, picking and transportation of hanging and folded garments.

Hanging Storage Systems

Multi-Function Facility

Multi-tier garment storage facility with picking & sortation area. Improves product accessibility and visibility.

Static Storage

Cantilever arm storage rails, with dynamic feed lines down each aisle, reduce physical handling and allow simple and flexible stock management.

Dynamic Storage

Cross-dock facility with dynamic storage of garments on trolleys for high volume, rapid throughput operations.

Garment Transport

Transport of manufactured garments on overhead trolleys in batches, eliminates the use of problematic floor based trolleys.

Retail Distribution

Dynamic buffer and sortation on ground level with storage on mezzanine above. This utilizes the facility volume and maintains ground floor accessibility.

Garment Production & Processing

Production

Rail system using standard GOH components with single wheel carrier for improved garment production.

Processing

Monorail trolley system used in garment processing increases productivity through reduced handling and improved work flow. Introducing this discipline reduces supervision requirements.

Bagging

Quality Control

Ticketing & Tagging

Rogol Conveyor

Powered Rogol conveyor for transfer between levels.

- Reversible
- Used for high volume applications
- Low maintenance
- Cost effective solutions
- Automated loading and unloading

Tubular Yoke Conveyor

Empty box conveyor used to transfer cartons and totes between make-up stations and packing stations. Reduces packing material build-up and improves efficiency.

Powered Overhead Conveyor

Powered overhead conveyor for transfer of trolleys over long distances, between multiple operating levels, and for automation of trolleys.

Vehicle Loading

For Transport of Hanging Garments

Telescopic Boom

Retractable telescopic loading boom allows trolleys to be transferred straight into a vehicle, or at a 90 degree angle.

Trolley Into Vehicle

Monorail trolleys being loaded directly into the vehicle, reducing loading times to a matter of minutes.

Combined Loading

Hanging garment sets and cartons loaded into a vehicle for delivery to stores.

Carrier Types

Monorail Trolleys

1 Tier

Trapezium Trolleys

2 Tier

3 Tier
